

Command. Control. Connect.

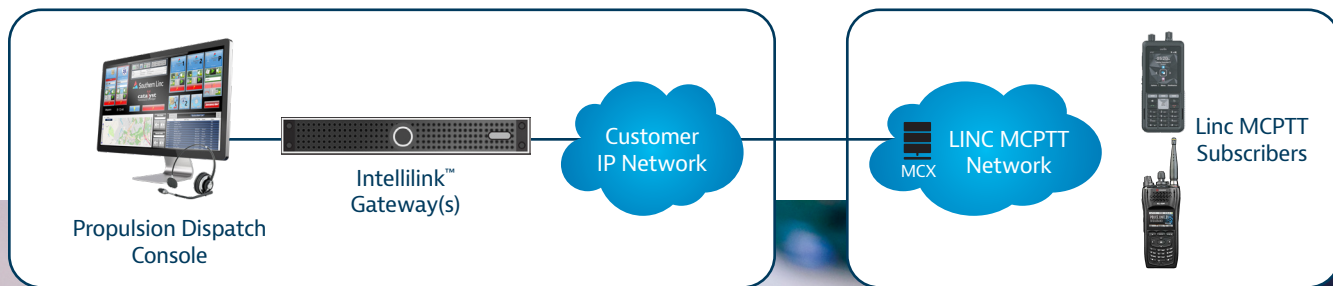

Propulsion™ dispatch solutions with interoperable LMR and LTE.

Bridge multiple radio systems with Catalyst Propulsion—a state-of-the-art dispatch console system that provides advanced 3GPP-compliant interoperability for mission critical push-to-talk (MCPTT) across our CriticalLinc™ LTE network and other private LMR networks.

Designed to serve as a native Linc MCPTT Command and Control communications environment, this system is easy to install and optimized for the mission critical requirements of public safety, utility, education, transportation and large enterprise organizations.

Solution Architecture

Contact a Southern Linc Rep to learn more.

Use Propulsion with the IntelliLink Gateway to manage dispatch communications.

- Manage Linc MCPTT subscribers using a single Dispatch Command and Control platform.
- Control dispatch and emergency calls with priority over all other Linc MCPTT users and devices.
- Multiple, simultaneous group and individual calls with advanced activity logging and recording.
- Applicable across Public Safety, Utilities, Transportation, Healthcare, Education and Enterprise markets.

Packages

Customizable packages are available to meet your organization's needs.

**Talk Paths can be used for group or private communications.*

Single Dispatch Console

Includes 4 Talk Paths*

Starting at
\$36,500

4 Talk Paths

Add-On for Single Console

\$15,275 per package

Two Dispatch Consoles

Includes 4 Talk Paths*

Starting at
\$45,500

4 Talk Paths

Add-On for Two Consoles

\$16,500 per package

Catalyst Propulsion service requires a one-time purchase of a Dispatch Console Gateway Site License as well as a one-time fee for each Console Position and Talk Path. Talk Paths are sold in groups of four. Each Propulsion Console Position requires a Southern Linc Dispatch Console Service Plan that provides unlimited MCPTT service. A 5-year service agreement is required for each plan.
